Allowable Subject Matter

Claim 1-14 are allowable over the prior art of record because the prior art of record does not teach or suggest the entire combination of elements of the tape leader set forth including a first leader and a second leader; and a button coupled to a first end of a first leader and protruding from a first surface of said first leader said second leader including an aperture for accepting said button to couple said first and second leaders together. U.S. Patent no. 3,706,423 to Neff shows a formation at the end of a leader tape comprising a folded back portion of the leader tape. This structure, while named a "button" by the reference, does not anticipate the claimed invention. Given its broadest reasonable interpretation consistent with applicant's specification, the term "button" covers a separate element attached to the end of the leader tape in a protruding manner. It does not encompass a folded portion such as that shown by Neff. As such, the prior art does not teach or suggest the use of a button to couple a first and second leader as advanced above and such do not provide the necessary motivation, absent applicant's specification, for modifying the tape leader in the manner required by the claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
